Constructor Detail

BotException

```
public BotException(java.lang.String message)
```

Initializes a new instance of the BotException class with a specified error message.

Parameters:

`message` - is the message that describes the error.

BotException

```
public BotException(java.lang.String message,
                    java.lang.Exception cause)
```

Initializes a new instance of the BotException class with a specified error message and a reference to the inner exception that is the cause of this exception.

Parameters:

`message` - is the error message that explains the reason for the exception.

`cause` - is the exception that is the cause of the current exception.
